

### *Methods:*

- 1. N-way Unicast*
- 2. Uncontrolled Flooding*
- 3. Controlled Flooding*
  - 3.1. Seq number based*
  - 3.2. Reverse path forwarding*

## *N-way Unicast*

Source-duplication versus in-network duplication.  
(a) source duplication, (b) in-network duplication

# *Uncontrolled Flooding*

# Controlled Flooding

## Methods:

1. *Sequence number based*
2. *Reverse path forwarding*

Nodes B, C, D, E and F receive either one or two redundant packets.

**Ideally, every node should receive only one copy of the broadcast packet.**

→ Packet will be forwarded

→| Packet not forwarded beyond receiving router

# Spanning Tree Example

(a) Broadcast initiated at A

(b) Broadcast initiated at D

# Multicast Routing

## Methods:

1. *Source based tree*
2. *Core based or Group shared tree*

## Source based tree

## *Core based or Group shared tree*
